

POWERFUL PLANTING TOOLS

InCommand: Use the Seed Row unlock for the InCommand 1200 to select your rate by row.

Each planting season you get one chance to get it just right. Making sure your planter is performing optimally and each seed is being placed at the right depth, at the right spacing and at the right population is critical. Best of all, you can improve the planter you already know and love.

Connect All Your Displays

InCommand and AgFiniti connect seamlessly share guidance lines, as-planted maps for AutoSwath, configurations and more across your operation. No longer worry about needing to move variety maps from the planter to the combine.

SEE YOUR PLANTER'S PERFORMANCE LIKE NEVER BEFORE

Planter Performance has Been a Guessing Game Until Now

At the row level, planter performance issues, like skips and doubles, are quickly identified so operators can immediately take action and avoid costly mistakes. That's not it! See multiple screens at once with InCommand's unique split-screen feature. Don't wait until harvest to evaluate planter performance - get InCommand!

Unmatched Planting Visibility

Get row-level mapping for spacing, skips, doubles, downforce applied, and more.

Integrated Machine Guidance

InCommand features a built-in lightbar and autosteer capabilities.

Satellite Imagery

Maximize your visibility in the field with satellite imagery.

Split-Screen Display

View two screens at once with the split screen feature. Choose between in-depth analysis screen, or historical maps and data, and more!

SURE AT ANY SPEED

InCommand: Know your planter is performing. System alarms will alert users of potential planter issues and how to fix them.

There are years that narrow planting windows force farmers to decide whether they plant faster and sacrifice seed placement or to drag out the season but place seeds optimally. We say “why choose?” with the introduction of SureSpeed, available for spring 2021 corn and soybean planting.

Perfect Spacing

SureSpeed accurately places seed at 12 mph, but also at speeds much slower. Perfect planting is a priority, speed is an added bonus.

NEW! **Ag Leader** **SureSpeed**

FOR ACCURACY AND EFFICIENCY

Aftermarket Solution

With solutions for various makes and models of box hopper and bulk fill planters, the system was designed to give your planter high accuracy at high speeds.

Singulation & Spacing

Unique meter design and controlled transfer of seeds from meter to delivery device maximizes singulation and ensures perfect spacing at speeds up to 12 mph.

Performance

The flighted delivery belt has the lowest release point in the industry for consistent spacing at any speed.

Maintenance

Low maintenance system. No tools required.

Pair with SureForce

SureSpeed paired with SureForce maintains consistent ground contact and smooth row unit ride with increasing speed in varying conditions.

Ease of Use

Controlled by the industry-leading, user-friendly InCommand 1200 display.

YOUR PLANTER REIMAGINED

AgFiniti: Know exactly how much down force was applied, row by row, across your whole planting operation. Take this information with you to verify stand health and variety performance.

SeedCommand products come together to bring unmatched planter technology to your farm. Fields planted at consistent depths and spacing make for uniform emergence, picket fence stands and ultimately more yield come harvest. So what are you waiting for?

SureForce

Dual-Acting Control

Hydraulic Down Force applies up to 650 lbs. additional weight to the row unit to overcome the heaviest compaction. Integrated Hydraulic Uplift removes weight from the row unit to maintain consistent planting depth regardless of soil conditions.

View Down Force Maps On the Go

View gauge wheel load and down force applied maps on your InCommand display, or with AgFiniti.

Individual Row Control

Monitor, record and control the down pressure needs of each individual row to allow for consistent planting depths across various topography and soil conditions.

No Margins, No Guessing

Let InCommand and SureForce do the work for you! Simple user preference settings maintain your gauge wheel contact and there's no guessing with InCommand's high-resolution row-by-row down force map.

POWERFUL METER CONTROL

SureDrive Electric Drives

Powerful Meter Control

Individual row section control to quickly vary the speed for population rate changes and turn compensation.

Versatile to Work with Your Meter

The electric drive motor isn't tied to a specific brand or type of seed meter - including hard-pulling finger meters.

Turn Compensation

SureDrive automatically adjusts meter speed on each row to keep a consistent population around turns, contours and terraces.

Maintenance Free

SureDrive's robust, sealed construction is maintenance free for durability and reliability.
